ONESOURCE™

Global Access

Collect information from around the world for accurate provisioning

We make it simple to collect the international data you need for accurate provisioning, no matter where your tax team is located. The web-based ONESOURCE® Global Access module from Thomson Reuters lets your overseas colleagues enter information directly into the ONESOURCE Tax Provision database from any location. They can enter values in their local language and currency, and Global Access will automatically translate for you.

In addition, they can attach notes or documents so that all pertinent information lives with the data, thus strengthening the audit trail and adding a level of detail for analysis. And because the data is stored in a central repository, it is easily accessible for review. Plus, you can customize your instructions so that even users with no tax expertise can easily follow each screen, step by step.

What you get with our Global Access Tax Provision add-on

FEATURE	ACTIVITY
User-friendly interface	Remote users can enter data through the online interface, no matter where in the world they are located.
Streamlined data collection	Data flows automatically into your tax provision database, supporting real-time reporting in local currencies.
Controls and permissions	Adjust controls, permissions, and sign-offs to fit your workflow, so that the right people review the right information.
Configurable features	Get the right information when you need it with user-configurable instructions, questions, and user interface options.
Language settings	Choose from languages including English, French, Spanish, German, and many more.
Rate tracking	Easily view exchange rate changes that are tracked in the system and flagged in reports.
